

# Toilet Alarm IP65 Rated

The new IP65 rated disabled toilet alarm products are ideal for installation in areas that are unsuitable for traditional toilet alarm products; such as shower rooms, wet rooms and other places where moisture and humidity are present.

## INTRODUCTION:

- It is now possible to fit disabled toilet alarm products, such as pull cords and call buttons, in shower cubicles and other wet areas. Fully tested and certified to IP65 standard, the new units can be purchased individually to connect to our toilet alarm system controllers:
  - Four-way control panel (DTA4).
  - Omnicare EVC.
  - Care2 EVC.
- Up until now, it is known that traditional style pull cords and buttons have been fitted in humid areas and rooms. This frequently leads to items becoming faulty and in need of replacement, which is not only an expensive inconvenience, but regrettably often results in a non-functional system.
- Changing over to the new IP65 toilet alarm products will not only save on the finances but, crucially, will mean that a system is much less likely to fail.
- Not only are the products IP65 rated, they are also fully compliant to BS8300.

## BENEFITS & FEATURES:

- There are four products in the range:
  - Pull cord.
  - Call button.
  - Reset button.
  - Call button and reset button.
- The units can be fitted in combination with any of our DTAKIT products..
- Control is via either our four-way control panel (DTA4), the Omnicare EVC system or the Care2 EVC system.
- Provides a long-awaited solution and will negate the need to frequently replace failed units due to humidity.
- Each unit is supplied with a 16mm cable gland to ensure the point of cable entry is suitably sealed.
- Surface mounting units with a grey finish.
- Compatible with the following Baldwin Boxall products:
  - DTA4 4-way toilet alarm control panel.
  - DTAKIT products.
  - Omnicare EVC system.
  - Care2 EVC system.
